OFFICE ACTION

Election/Restriction

1. Claims 1-45 are subjected to be restricted as required under *35 U.S.C. 121*:

(I) Claims 1-31, drawn to a method of forming a dielectric material layer, classified in class 438, subclass 763.

(II) Claims 32-45, drawn to a dielectric material structure, classified in class 257, subclass 637.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as a method of forming a dielectric material layer and a dielectric material structure, respectively. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, unpatentability of the group I invention would not necessarily imply unpatentability of the group II invention. For example, the hardened layers, claimed in Group II, can be formed by any well-known technique (e.g., CVD, sputtering, etc.) including the energy treatment technique of dielectric material sub-layer(s) to form the hardened layer(s), which is claimed in Group I (i.e., the method invention). Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not coextensive. Hence, separate examination would be required and restriction for examination purposes as indicated is proper.

3. Applicant is advised that a reply to this requirement must include an identification of the invention (species) that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional invention which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected invention. MPEP § 809.02(a).

4. Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in.

Applicant is advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37CFR 1.143)
